

Assignment 1 - "Assembling Lego Kits"

Authors: Guilherme Sousa Ferreira, Diogo Loayza Duarte

MEEC: Computer Vision - 2nd Semester

Date: March 7, 2026

Abstract

This document consists in the description of the activities necessary to complete the 1st assignment in the Computer Vision course taught at FEUP. Throughout this work we use the Python programming language and libraries to program scripts in Google Colab's jupyter notebook that process data in the form of images, performing various operations with it that will allow us to assemble lego kits as the final objective of the assignment.
